About US

Oaksley Energy Resources, LLC

Oaksley Energy Resources LLC is a leading energy consulting and service company, offering services to oilfield operators and service providers on land, swamp and offshore locations in the United States and Nigerian Oil and Gas industries. We render an array of services to marginal field operators and service companies.

At Oaksley we aim to become a leading group at both local and international levels in the provision of high quality services for the production, distribution and usage of crude oil and natural gas, encouraging a clean and safe type of energy and pursuing continuous improvement to satisfy the highest expectations of our customers.

Our Vision

Excellent project design, execution and delivery through implementation of industry best practices while adding value to the environment.

Oilfield Consulting

At Oaksley, we support clients in a variety of areas including process engineering, piping layout, corrosion protection, pipeline maintenance, mechanical design, civil and structural engineering, electrical & instrumentation engineering as well as procurement engineering.

We have expertise in providing engineering, project management, and solutions for onshore and offshore facilities. Our experienced team, coupled with world-class project management systems, enable us to deliver projects with efficiency.

Oaksley's commitment to quality and extensive customer support have led to long-term relationships and repeat business from clients in a variety of markets. Whatever the segment in the energy value chain, our consulting teams seamlessly work with our clients to deliver facilities and projects that meet or exceed expectations.

Project Management Services

Oaksley Energy Resources, LLC has an impressive track record of providing our clients with proven solutions that are both effective and cost-efficient. We offer tailored project management services to support our clients' specific needs.

With our flexible approach we can provide a full project management team or specific specialist support. We understand the aims of each phase of a project and ensure the most cost-effective yet safe solutions to the required outcomes. We provide support in the following areas:

- Cost Estimating & Planning
- Construction advice
- Procurement & Procurement Management
- Installation Management
- Construction Management
- Commissioning Support

In addition, we provide an integrated services project manager acting as a single point of contact for the client in the field or at the base.

Drilling Services

Our Drilling and Evaluation division delivers safe, cost effective drilling services at the highest level of efficiency to clients.

This we do using Schlumberger and Baker-Hughes Drilling Services range of tools. We provide drilling, evaluation, and precise well-bore placement solutions that enable our stakeholders to model, measure, and optimize your well construction activities.

Our services in this portfolio include the following: Bore Hole Surveys, Gamma Ray, Resistivity, Density and Neutron measurements, Sonic and Directional Drilling.

With our efficient drilling rigs, we ensure cost-effective delivery of wells.

Wellhead Engineering Services

Oaksley Energy Services has the experience to supply complete new wellhead systems – without the long lead times of other suppliers. In addition to supplies, we service a variety of different wellhead equipment and manufacturer interfaces, thus ensuring flexibility for our clients.

Our wellhead service includes hot tapping, cold cutting, 1st & 2nd Line wellhead maintenance and the supply or sale of tools to support the repair or replacement process.

Some equipment we supply, install and maintain include, gate valves, casing and tubing spools, actuators, xmas trees, wellhead control panels, anti-theft kits, test plugs, casing and tubing hangers, starter heads and more.
